

QoI Fungicide Resistance in *Cercospora sojina*, cause of Frogeye Leaf Spot

Highlighted counties had at least one frogeye leaf spot sample containing QoI/Strobilurin fungicide resistant spores. This does not indicate that all areas in highlighted counties are resistant or that counties not highlighted are completely sensitive, the information presented is based on samples sent in from farmers, consultants, and soybean sentinel plots. Research funding provided by Tennessee Soybean Promotion Board. To submit a sample to be tested go to UTCrops.com ([FLS – testing fungicide resistance](#))
